PATENT

AMENDMENTS TO THE CLAIMS:

Please amend the claims as follows, substituting any amended claim(s) for the corresponding pending claim(s):

1. (Withdrawn/Currently Amended) A method of forming a conductive structure within an integrated circuit comprising:

forming a conformal tungsten layer over a dielectric layer and within and filling any unfilled portions of openings within the dielectric layer;

forming an etch protective barrier layer over the tungsten layer, wherein the protective barrier layer comprises a material for which removal by chemical mechanical polishing is primarily mechanical; and

removing at least portions of the etch protective barrier layer and the tungsten layer by chemical mechanical polishing.

2. (Withdrawn/Currently Amended) The method as set forth in Claim 1 wherein the step of forming an etch protective barrier layer over the tungsten layer further comprises:

forming a titanium or titanium nitride layer on the tungsten layer.

PATENT

3. (Withdrawn/Currently Amended) The method as set forth in Claim 2 wherein the step of removing at least portions of the etch protective barrier layer and the tungsten layer by chemical mechanical polishing further comprises:

removing portions of the tungsten layer overlying the dielectric layer without removing portions of the tungsten layer within the openings within the dielectric layer.

4. (Withdrawn/Currently Amended) The method as set forth in Claim 3 wherein the step of removing at least portions of the etch protective barrier layer and the tungsten layer by chemical mechanical polishing further comprises:

removing all of the protective barrier layer.

5. (Withdrawn/Currently Amended) The method as set forth in Claim 3 wherein the step of removing at least portions of the etch protective barrier layer and the tungsten layer by chemical mechanical polishing further comprises:

removing portions of the etch protective barrier layer overlying dielectric regions between the openings within the dielectric layer.

PATENT

6. (Withdrawn/Currently Amended) The method as set forth in Claim 5 wherein the step of removing at least portions of the etch protective barrier layer and the tungsten layer by chemical mechanical polishing further comprises:

after removing portions of the etch protective barrier layer overlying the dielectric regions between the openings within the dielectric layer, removing portions of the tungsten layer overlying the dielectric regions between the openings within the dielectric layer; and

during removal of portions of the tungsten layer overlying the dielectric regions between the openings within the dielectric layer, removing portions of the etch protective barrier layer overlying the openings within the dielectric layer.

7. (Withdrawn/Currently Amended) The method as set forth in Claim 2 wherein the step of removing at least portions of the etch protective barrier layer and the tungsten layer by chemical mechanical polishing further comprises:

removing portions of the etch protective barrier layer and the tungsten layer overlying dielectric regions between the openings within the dielectric layer to planarize remaining portions of the tungsten layer and remaining portions of the etch protective barrier layer, if any, with the dielectric layer.

PATENT

8. (Currently Amended) A portion of an integrated circuit structure comprising:
a dielectric layer over a substrate;
a conformal tungsten layer over the dielectric layer and within and filling any unfilled portions of openings within the dielectric layer; and
an etch protective barrier layer over the tungsten layer and within the openings, wherein the etch protective barrier layer comprises a material for which removal by chemical mechanical polishing is primarily mechanical.
9. (Currently Amended) The portion of an integrated circuit structure as set forth in Claim 8 wherein the etch protective barrier layer is titanium or titanium nitride.
10. (Original) The portion of an integrated circuit structure as set forth in Claim 8 wherein portions of the tungsten layer within the openings are thicker than portions of the tungsten layer over the dielectric layer.
11. (Currently Amended) The portion of an integrated circuit structure as set forth in Claim 8 wherein the etch protective barrier layer overlies the entire tungsten layer.

PATENT

12. (Currently Amended) The portion of an integrated circuit structure as set forth in Claim 8 wherein the etch protective barrier layer overlies portions of the tungsten layer within the openings but not portions of the tungsten layer over the dielectric layer.
13. (Original) The portion of an integrated circuit structure as set forth in Claim 8 wherein the tungsten layer has a thickness of between about 4500 and 8000 angstroms.
14. (Currently Amended) The portion of an integrated circuit structure as set forth in Claim 8 wherein the etch protective barrier layer has a thickness of between about 100 and 800 angstroms.
15. (Original) The portion of an integrated circuit structure as set forth in Claim 8 wherein at least one opening within the dielectric layer is sized to form a capacitive electrode from tungsten within the at least one opening.

PATENT

16. (Currently Amended) A portion of an integrated circuit structure comprising:
a dielectric layer having an opening therein;
tungsten within and filling the opening, an upper surface of the tungsten having an arcuate shape across substantially all of a width of the opening; and
a portion of an etch protective barrier layer over only a central region of the tungsten and within the opening, but not over peripheral regions of the tungsten, wherein the portion of the etch protective barrier layer comprises a material for which removal by chemical mechanical polishing is primarily mechanical.
17. (Currently Amended) The portion of an integrated circuit structure as set forth in Claim 16 wherein an upper surface of the tungsten is exposed around the portion of the etch protective barrier layer.
18. (Currently Amended) The portion of an integrated circuit structure as set forth in Claim 16 wherein the portion of the etch protective barrier layer is titanium or titanium nitride.
19. (Currently Amended) The portion of an integrated circuit structure as set forth in Claim 16 wherein the tungsten and the portion of the etch protective barrier layer form an upper surface which is substantially planar with an upper surface of the dielectric layer.
